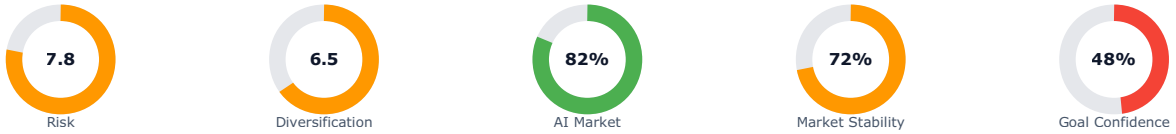
Financial Intelligence Report

Generated on 26 Mar 2026

1. Executive Summary

This report combines client profile inputs, current macro conditions, goal projections, and portfolio diagnostics into one deployment-ready plan.



✅	⚠️	✅	⚠️	❌
RISK	DIVERSIFICATION	AI MARKET	MARKET STABILITY	GOAL CONFIDENCE
7.8/10	**6.5/10**	**82/100**	**72%**	**48%**
On Track	Attention	On Track	Attention	Action Required

Source: Integrated planning stack I As of 26 Mar 2026, 06:22 PM

2. Client Profile

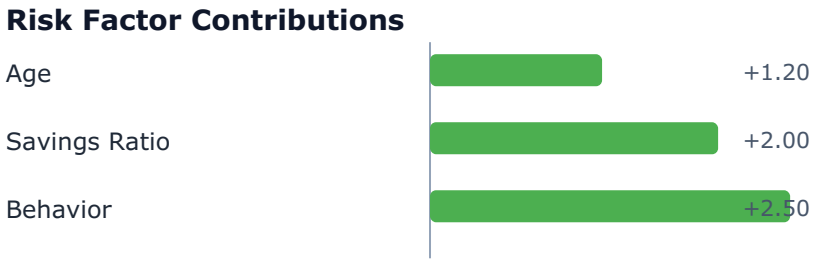
Attribute	Value
Age	35 years
Dependents	2
Monthly Income	₹120,000
Monthly Savings Capacity	₹40,000
Effective Monthly Savings	₹35,000
Behavioural Profile	Aggressive
Source: Client declaration I As of 26 Mar 2026, 06:22 PM	

Insurance & Liability

Protection / Liability	Current Position	Status
Term Life Cover	₹5,000,000	Adequate
Health Cover	₹1,000,000	Adequate
Annual Insurance Premium	₹50,000	Ongoing
Total Liabilities	₹2,000,000	Monthly EMI ₹25,000
Source: Insurance inputs + liability schedule I As of 26 Mar 2026, 06:22 PM		

3. Risk Score Explanation

Your Risk Score is **7.8 / 10**, placing you in the **Aggressive** category.



Methodology Note: Your risk score should match your ability to stay invested through volatility. It is calibrated so that the Conservative/Moderate/Aggressive bands reflect real-world risk capacity.
Mathematical Basis: Predicted by a tree-based ML model using weighted profile features: behavior (investment preference), savings-to-income ratio, age (risk capacity), and dependents. The score is then calibrated and assigned to deviation-based risk bands for Conservative/Moderate/Aggressive categories.

Factor	Contribution
Age	+1.20
Savings Ratio	+2.00
Behavior	+2.50

4. Goal Planning Breakdown

Retirement

Assumptions Used
Inflation Rate: 6.5% — Source: RBI CPI Q1 2026
Expected ROI: 12.0% — Basis: Retirement projection base-case assumption
SIP Step-Up: 10.0% annual step-up
Tax Treatment: Pre-tax returns shown. LTCG @ 10% applicable on equity gains above ₹1L/year.

Goal Metric	Value
Goal Horizon	25 years
Target Corpus	₹38,500,000
Required Monthly SIP	₹59,294
Inflation Rate Used	6.50%
ROI Assumption	12.00%
Step-Up SIP Option	10.00% annual step-up

Source: Retirement planning engine | As of 25 Mar 2026, 10:00 PM

ACCUMULATION PHASE

₹38,500,000

Corpus needed by retirement age

Required monthly SIP: ₹59,294

DISTRIBUTION PHASE

₹31,000,000

Corpus to sustain ₹150,000/month for 25 years

Shortfall: ₹7,500,000

You need to increase your SIP by ₹9,000 to cover post-retirement income needs.

5. Existing Portfolio Health

TOTAL CORPUS	NET WORTH	DIVERSIFICATION SCORE
₹900,000	**₹-1,100,000**	**6.5/10**

CRIT Action Required
Risk mismatch present.

WARN Attention
Cash drag is high.

Asset Bucket	Current Allocation
Savings / Cash	35.00%
Mutual Funds / Equity	20.00%
Fixed Deposits / Bonds	35.00%
Gold	10.00%

Source: Portfolio Health Engine | As of 25 Mar 2026, 10:00 PM

6. Insurance & Liability Summary

Insurance / Liability	Current	Recommended / Action
Term Cover	₹5,000,000	₹14,400,000
Health Cover	₹1,000,000	Adequate
Total Liabilities	₹2,000,000	EMI ₹25,000/month

Source: Insurance inputs + liability schedule | As of 26 Mar 2026, 06:22 PM

Loan Type	Outstanding Principal	Monthly EMI
Home Loan	₹2,000,000	₹25,000

Source: Insurance inputs + liability schedule | As of 26 Mar 2026, 06:22 PM

7. Target Asset Allocation

Reasoning: Based on Risk Score 7.8 and current Market Stability 72%.

Asset Class	Target Weight	Reasoning
Large Cap Equity	35.00%	Core growth exposure.
Mid Cap Equity	20.00%	Core growth exposure.
Debt / Fixed Income	30.00%	Capital preservation and volatility dampening.
Gold	10.00%	Macro hedge and diversification.
Bonds	5.00%	Capital preservation and volatility dampening.

Source: Allocation Engine + macro overlay | As of 25 Mar 2026, 10:00 PM

8. Investment Mode Recommendation

STP

Trigger Reason: Volatility is moderate and idle capital is high.

Deployment Plan: Park ₹3,00,000 in liquid fund and transfer ₹50,000 monthly for 6 months.

Expected Advantage vs Flat SIP: Estimated ₹1.2L better outcome due to phased deployment.

Source: Investment Mode Engine | As of 25 Mar 2026, 10:00 PM

9. Mutual Fund Recommendations

Fund A (Large Cap)

Target Weight	AI Score	Benchmark	1Y Alpha	3Y Alpha	Information Ratio
40.00%	88.0/100	Nifty 50 TRI	+2.10%	+4.20%	0.80

Source: Recommendation Engine + benchmark fixture | As of 26 Mar 2026

Why Selected: Consistently outperformed Nifty 50 TRI by 4.2% over 3Y.

Why Now: Large-cap preferred as VIX is elevated.

Risk Note: Moderate volatility at 15.0% — stay invested through cycles for the thesis to play out.

10. Scenario Projections

Assumptions Used
Inflation Rate: 6.5% — Source: RBI CPI Q1 2026
Expected ROI: 12.0% — Basis: Goal horizon base-case assumption
Base Return Scenarios: Conservative 8%, Moderate 12%, Aggressive 15%
SIP Top-Up Rate: 10.0% annual step-up
Tax Treatment: Pre-tax returns shown. LTCG @ 10% applicable on equity gains above ₹1L/year.

SIP Projection Timeline

Year	Cumulative Invested Amount	Projected Value	Wealth Created
1	₹1,320,000	₹1,462,469	₹142,469
2	₹1,740,000	₹2,096,273	₹356,273
3	₹2,160,000	₹2,810,460	₹650,460
4	₹2,580,000	₹3,615,223	₹1,035,223
5	₹3,000,000	₹4,522,050	₹1,522,050
6	₹3,420,000	₹5,543,885	₹2,123,885
7	₹3,840,000	₹6,695,315	₹2,855,315
8	₹4,260,000	₹7,992,775	₹3,732,775
9	₹4,680,000	₹9,454,786	₹4,774,786
10	₹5,100,000	₹11,102,216	₹6,002,216
11	₹5,520,000	₹12,958,581	₹7,438,581
12	₹5,940,000	₹15,050,380	₹9,110,380
13	₹6,360,000	₹17,407,472	₹11,047,472
14	₹6,780,000	₹20,063,501	₹13,283,501
15	₹7,200,000	₹23,056,382	₹15,856,382
16	₹7,620,000	₹26,428,835	₹18,808,835
17	₹8,040,000	₹30,228,999	₹22,188,999
18	₹8,460,000	₹34,511,119	₹26,051,119
19	₹8,880,000	₹39,336,319	₹30,456,319
20	₹9,300,000	₹44,773,475	₹35,473,475
21	₹9,720,000	₹50,900,199	₹41,180,199

Source: Projection Engine + macro assumptions | As of 25 Mar 2026, 10:00 PM

Year	Cumulative Invested Amount	Projected Value	Wealth Created
22	₹10,140,000	₹57,803,945	₹47,663,945
23	₹10,560,000	₹65,583,259	₹55,023,259
24	₹10,980,000	₹74,349,184	₹63,369,184
25	₹11,400,000	₹84,226,848	₹72,826,848
Source: Projection Engine + macro assumptions I As of 25 Mar 2026, 10:00 PM			

Expected Returns (Goal Horizon)

Market Scenario	Return Assumption	Projected Corpus	Inflation-Adjusted Corpus	Probability of Achieving Goal
Conservative	8%	₹40,113,988	₹8,309,132	N/A
Moderate	12%	₹84,226,848	₹17,446,582	47.6%
Aggressive	15%	₹152,332,289	₹31,553,808	N/A
Source: Projection Engine + macro assumptions I As of 25 Mar 2026, 10:00 PM				

Step-Up SIP Comparison

Mode	Monthly SIP (Year 1)	Corpus at Goal	Total Invested	Wealth Multiplier
Flat SIP	₹59,294	₹38,500,000	₹17,788,200	2.16x
10% Annual Top-Up	₹44,500	₹38,500,000	₹20,500,000	1.88x
Source: Projection Engine + macro assumptions I As of 25 Mar 2026, 10:00 PM				

A 10% annual step-up allows a lower starting SIP.

11. Monte Carlo Simulation

Confidence Score: 47.6%
Confidence is below institutional comfort levels and needs remediation.

Fix Recommendation
Your current SIP capacity (₹35,000) covers 59% of the required SIP (₹59,294). Gap: ₹24,294/month.
Option 1: Increase monthly savings by ₹24,294 to meet the ₹38,500,000 corpus target.
Option 2: Extend retirement age by 2 years — required SIP drops to ₹32,572.
Option 3: Reduce retirement corpus target to ₹81,717,286 (achievable at ₹35,000 SIP = 39% confidence).
Recommended: option_2

12. Score Standards Reference

This appendix explains the methodology, mathematical basis, benchmark thresholds, and macro context behind each score used in this report.

Risk Score (1-10)

Target Benchmark: User-specific (life stage alignment)

User-Facing Summary: Your risk score should match your ability to stay invested through volatility. It is calibrated so that the Conservative/Moderate/Aggressive bands reflect real-world risk capacity.

Mathematical Basis: Predicted by a tree-based ML model using weighted profile features: behavior (investment preference), savings-to-income ratio, age (risk capacity), and dependents. The score is then calibrated and assigned to deviation-based risk bands for Conservative/Moderate/Aggressive categories.

Geopolitical Context: RBI rate-cycle shifts (repo hikes/cuts) change household risk capacity via disposable income (e.g., EMI burden). Higher geopolitical tension and volatility reduce effective risk tolerance.

Historical Calibration: Calibrated using ~10 years of Indian investor behavior proxies and market drawdown patterns to align typical risk outcomes with observed portfolio survivability.

Diversification Score (1-10)

Target Benchmark: 9.0 for Diversification

User-Facing Summary: A higher diversification score means your money is spread across the right assets, not just more assets. A 9.0+ score is a near-institutional standard for avoiding concentration drag.

Mathematical Basis: Penalty-matrix score starting from 10.0 and subtracting structured inefficiencies: cash drag, risk/asset mismatch, low equity exposure, and over-concentration (e.g., excessive gold or fixed deposits). Final score reflects how efficiently capital is deployed.

Geopolitical Context: Currency and global stress can change how defensive assets (gold/FDs) behave. This shifts what counts as a 'healthy' allocation balance.

Historical Calibration: Backtested against post-2008 crash portfolio concentration failures and how diversified allocations reduced drawdowns and opportunity losses.

AI Market Score (0-100)

Target Benchmark: 85 for AI Market Score

User-Facing Summary: This score tells you whether a fund is not only strong historically, but also suitable for the current market environment. 85+ funds are expected to have a better match to today's conditions.

Mathematical Basis: Weighted composite: 30% * 1Y return + 30% * 3Y return + 20% * consistency + 20% * market-fit bonus. The 85 threshold is used as a 'high enough' level for funds that score well on both track record and current suitability.

Geopolitical Context: Macro regime changes (e.g., VIX spikes and Fed-rate decisions) influence what 'market-fit' means. That bonus is dynamic, so the same fund can rank differently across market conditions.

Historical Calibration: Calibrated using Nifty bull/bear cycles since ~2000 to ensure funds scoring 85+ tend to outperform their benchmarks in the following window.

Market Stability Score (0-100%)

Target Benchmark: >80% (Green Light)

User-Facing Summary: Higher stability means markets are calmer and long-term SIP planning is more reliable. Below ~80%, uncertainty rises and your projections should be more conservative.

Mathematical Basis: Stability = 1 - Composite Risk, where Composite Risk = (35% * inflation impact) + (35% * geopolitical index) + (30% * VIX normalized). Inflation impact maps <=3%->0.0 and >=15%->1.0 (linear); VIX maps <=12->0.0 and >=35->1.0 (linear). A stability above 80% implies Composite Risk <= 0.20 (all drivers are relatively benign).

Geopolitical Context: Repo-rate decisions, India CPI prints, and global VIX are the live inputs. A single rate hike can quickly reduce the stability percentage by double-digit points.

Historical Calibration: Calibrated against episodes like the 2013 taper tantrum, the 2020 COVID crash, and the 2022 rate-hike cycle.

Goal Confidence Band (0-100%)

Target Benchmark: 85% probability of success

User-Facing Summary: Confidence around 85% means your plan is likely to work even in bad market years. If confidence drops, the system suggests adjustments so you can regain a safer probability of success.

Mathematical Basis: Final Confidence = Base Monte Carlo Probability * Macro Stability multiplier. Base probability comes from 1,000 Geometric Brownian Motion paths over the goal horizon, using expected returns +/- historical standard deviation (from ~15Y Nifty data). Confidence degrades when Market Stability < 0.6 because predictions become less reliable.

Geopolitical Context: Geopolitical shocks can reduce Macro Stability to ~0.3-0.4, temporarily lowering a high base-probability plan. This makes the system honest about black-swan uncertainty.

Historical Calibration: Calibrated using 1,000-scenario simulations on ~15Y Nifty data, aligning the 85% target with professional retirement planning acceptance levels.
